        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 00

                                                                                         [MIM:605441], resulting in very low concentration of adiponectin. Decreased adiponectin plasma levels are with obesity insulin resistance, and diabetes type 2. PHARMACEUTICAL: Adiponectin might be used in the treadiabetes type 2 and insulin resistance. SIMILARITY: Contains 1 collagenous domain. SIMILARITY: Contains 1 C1Q domain.
                                                                                                                                                                                                                                                                                     FUNCTION: IMPORTANT NEGATIVE REGULATOR IN HEMATOPOIESIS AND IMMUNE SYSTEMS; MAY BE INVOLVED IN ENDING INFLAMATORY RESPONSES THROUGH ITS INHIBITORY FUNCTIONS. INHIBITS ENDOTHELIAL MP-KAPPAB SIGNALING THROUGH A CAMP-DEPENDENT PATHWAY. INHIBITS INF-ALPHA-INDUCED EXPRESSION OF ENDOTHELIAL ADHESION MOLECULES. INVOLVED IN THE CONTROL OF FAT METABOLISM AND INSULIN SENSITIVITY. SUBUNIT: HOMOOLIGOMER (POTENTIAL).

"Generation and initial analysis of more than 15,000 full-length but and mouse CDNA sequences."
Immunobiology 199:286-294(1998).

C. I-FUNCTION: C1Q ASSOCIATES WITH THE PROENZYMES CIR AND C1S TO YIELD C1-FUNCTION: C1Q ASSOCIATES WITH THE SERUM COMPLEMENT SYSTEM. THE C1-FUNCTION: C1Q ASSOCIATES WITH THE CA(2+)-DEPENDENT C1C C1R(2)(21) PROENZYME COMPLEX, AND EFFICIENT ACTIVATION OF C1 TAKES PLACE ON INTERACTION OF THE GLOBULAR HEADS OF C1Q WITH THE C1 FC REGIONS OF IGG OR IGM ANTIBODY PRESENT IN IMMUNE COMPLEXES.

C. -!- SUBUNIT: C1 IS A CALCIUM-DEPENDENT TRIMOLECULAR COMPLEX OF C1Q, R AND S IN THE MOLAR RATION OF 1:2:2. C1Q SUBCOMPONENT IS COMPOSED OF NINE SUBUNITS, SIX OF WHICH ARE DISULFIDE-LINKED DIMERS OF THE C OF NINE SUBUNITS, SIX OF WHICH ARE DISULFIDE-LINKED DIMERS OF THE C CHAIN.

C. -!- DISEASE: Defects in C1QB are a cause of C1Q deficiency

It is a rare genetic disorder which is associated with recurrent infections and a high prevalence of lupus erythematosus-like symptoms. It is characterized by a loss of activation of the complement classical pathway. SIMILARITY: Contains 1 collagenous domain.

                                                                                                                                                                                                                                                                  PTW: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. MISCELLANEOUS: 4 consecutive G-P-P tripeptides are present at the C-terminus of the triple-helical region. These may provide high thermal stability of this region.

SIMILARITY: STRONG, TO ALPHA 2 TYPES VIII AND X COLLAGENS.
